WORKING EXPERIENCE

Software Engineer | indra

Remote
March 2026 - Present

- Specialized in building **web applications** using Ruby and Ruby on Rails. Technical background across the full backend development ecosystem, working with PostgreSQL databases and frontend technologies such as Stimulus, Turbo, JavaScript and bootstrap.
- Involved in the **development and maintenance** of internal Indra web applications, as well as web platforms for the **Community of Madrid**.
- Covering the entire software development lifecycle, from feature implementation to automated testing with RSpec, and deployment processes using Capistrano, Apache HTTP Server, and Unicorn environments. I use Git for version control and follow best practices.

Software Engineer | redborder

Santa Cruz de Tenerife, España
June 2024 - March 2026

- Development of real-time cybersecurity solutions, creating a **web** platform with Ruby, Ruby on Rails, Python, Go, and Logstash, focused on threat detection and prevention.
- Management of **databases** and **caching** systems in PostgreSQL, MongoDB, Redis, Aerospike, and Memcached and **Amazon Web Services (AWS)** for solutions on Amazon S3 developing high-volume and availability environments.
- Automation of a **Linux** infrastructure and deployments with Chef Server, Bash Scripting, and Jenkins, in addition to integrating Apache Druid, Kafka, and Zookeeper for advanced data processing and analysis.
- Administration of **virtualization** environments with Esxi and containers with Docker, applying version control with GitLab and GitHub for **CI/CD** workflows.
- Preparation of analytical **reports** on network traffic, threats, and security policies, applying reverse engineering techniques, threat intelligence, whitelists, and blacklists.

Full Stack Developer (Erasmus) | VivaDrive

Warsaw, Polond
March 2024 - May 2024

- Creation of a city and country recommendation **website** from scratch using React JS for the user interface, Tailwind CSS for design, and Django Rest Framework (Python) for the backend.
- Responsible for implementing **recommendations** from point A to B using React Leaflet. The system was based on parameters such as geographical coordinates and electric vehicle battery percentage.
- Improvements in **SEO**, performance, and accessibility on vivadrive.io, as well as resolving visual issues and fixing bugs.

EDUCATION

Senior Technician in Web Application Development | CIFP César Manrique

Tenerife, Spain
September 2022 - June 2024

- **Average grade:** 8.42 / 10
- **Technologies Taught:** .NET, C#, SQL Server, Spring, Java, MariaDB, Javascript, Docker, Kubernetes, Linux

TECHNOLOGIES

- **Programming languages:** Ruby, Python, Javascript, C#
- **Frameworks:** React, Ruby on Rails, .NET, Django Rest Framework
- **Databases / Storage:** PostgreSQL, Redis, SQL Server, S3 (AWS)

LANGUAGES

- **Spanish:** Native level
- **English:** Advanced level
